

Group 2 Progress Report

Brayan

This progress report we have 90% functionality of the entire program, there are still some small dents we need to buff out but overall we have achieved almost everything we set out to do for the report although our milestone has not yet been achieved. One of the challenges we had during this report was rearranging our database, the further we have gone into the project the more we have had the need to modify our database to fit with the project itself. The biggest accomplishment was finishing our cart system, correctly adding and deleting from the cart. We plan on successfully reaching our milestone on completing the entire functionality of the project and starting on polishing the project.

D'Angelo

We are behind in finishing the main program functionality this week. We have fulfilled some of our agenda, with the completion of the main functionality of the ordering system done:

- Customer can now:
 - Add items to the cart
 - Remove items from the cart
 - View items in the cart from both the menu and checkout form
- Employees can now:
 - View and modify menu partly, should finish either this/next week
 - View and modify accounts partly, should finish either this/next week
- Items needed to finish:
 - Add DataGridView Controls back to some employee forms
 - Debug finalizeOrder bug that prevents passing in Cart.OrderID
 - Main functionality before polishing of application

The biggest accomplishment that we've done since the last progress report is the addition of most of the cart ordering functionality. The biggest challenge that we've had is deciding on the utilization of CurrencyManagers in our forms that manage the data of the restaurant application and removing some controls before deciding on using the combination of DataGridView and

CurrencyManagers. We've been finishing most of the functionality needed for the customer, and will probably be ahead of schedule or at least on track to make our next milestone if we focus this week. Again, we have not fulfilled our milestone of finishing the main functionality this week.
