

Group 2 Progress Report

Brayan

Ending this progress report we have completed almost everything functionality wise. Once we are sure that the functionality is done we will do extensive testing trying to break the program and find bugs before finalizing the project. Our success was getting the receipt done, it was the last part of the program to finish the functionality. Some struggles we have is getting the bindings down for a textbox, we can't get it to show upon adding a new record into our database and currency manager. The final weeks of our timeline is to find bugs and polish the GUI for the user for a much smoother feel.

D'Angelo

At this point of time, we are on track to fulfill the total completion of all main functionality of the application by this weekend. We do have some design decisions to discuss regarding the sides and the menu, but it seems we are on track to fulfill the milestone of being completed with the main stuff by week 11. We are missing some stuff though, mainly the notification from the instructor to see if we have fixed email functionality of our application. We are working on finishing the implementation of the ManageAccounts and ManageMenu buttons and controls. We should be finished by next week and during/after next week should start collaborating with our instructor to make sure all the requirements are met before our final submission and the start of our presentation.
